

Claims

1. A display device for supporting a plurality of items comprising:
 - a frame member having an internal section; and
 - at least one rotating member comprising a rack which rotates via a central axis and which supports a plurality of display pieces
2. The device of Claim 1 wherein the display pieces comprise picture frame mold members.
3. A display device for supporting a plurality of items such as frame molds comprising:
 - a frame housing having a plurality of internal open sections;
 - a plurality of rotating panel members, each of which is situated within an internal section and each of which rotates relative to a central axis; and
 - means for affixing frame molds to the rotating panel member.
4. The display device of Claim 3 wherein the plurality of rotating panel members comprises an "x-shaped" composite of four members.
5. A display device for supporting a plurality of items such as frame molds comprising:
 - a frame housing having a plurality of internal open sections;
 - a plurality of rotating panel members have an "x-shape," each of which is situated within an internal section and each of which rotates relative to a central axis;

means for affixing frame molds to the rotating panel member; and
at least one additional wall surface proximate to the rotating panel
member for the placement of molds.
